

TechReady Syllabus

Archer Infotech, Kothrud Pune | Classroom & live-online batches | Updated September 2026

Institute: Archer Infotech, Kothrud, Pune - IT training since 2009

Website: <https://archerinfotech.in>

Contact: +91 9850 678451 | info@archerinfotech.in

Programme page: <https://archerinfotech.in/bootcamps/techready>

Programme Overview

Full-Time, Placement-Assisted Courses in Full Stack Development, Data Science, and AI — Archer Infotech, Pune

You have your degree. Now you need a job. Not just any job — the right job at the right company with the right salary. The kind of role your four years of engineering were supposed to lead to.

TechReady is Archer Infotech's intensive, full-time, placement-assisted training program built for one purpose: to turn engineering graduates and final-year students into professionals that IT companies across India are actively competing to hire. If you are willing to commit 6 months, 6 hours a day, and your full focus — TechReady will deliver your career.

Programme Details

- Designed For: Final-year students and engineering/BCA/BSc CS graduates
- Programs: Java Full Stack, Python Full Stack, MERN, MEAN, .NET Full Stack, Data Analytics, Data Science, Data Engineering, ML/AI Engineering, Advanced Frontend
- Duration: 6 to 8 Months per Program
- Daily Hours: Minimum 6 Hours per Day
- Mode: Full-Time — Classroom (Kothrud, Pune) with Online Option
- Placement Assistance: Placement-Assisted
- Language: English (Marathi and Hindi support available)
- Certification: Archer Infotech Certificate + Project Portfolio
- Eligibility: Final-year students or graduates — BE, BTech, BCA, BSc CS (any branch)
- Trainer Experience: 15+ Years Industry Experience
- Company Connections: 100+ Active Placement Partners

Who This Is For

- Final-year engineering students (BE, BTech — any branch) who want to start placement preparation before graduation
- Recent engineering graduates who did not get placed during campus drives
- BCA and BSc CS graduates who want to enter the software industry with a specialised skill set
- Career changers from non-IT engineering backgrounds (Mechanical, Civil, Electrical) transitioning into software
- Graduates who cleared campus placements but want to upskill before their joining date

When This Programme Is The Wrong Choice

- Anyone who cannot commit six hours a day for six to eight months. This is the whole premise of the programme; part-time attendance does not produce the outcome.
- Students still in second or third year — CareerCode is the programme that runs alongside a degree without competing with it.
- Anyone looking for a guaranteed job. We are placement-assisted, not placement-guaranteed, and our institute-records rate is 90% rather than 100%.
- Working professionals who cannot leave their current role. The full-time schedule is not compatible with a job.

- Anyone wanting a certificate for a CV rather than the skills behind it. The programme is built around reviewed project work and will be an unpleasant six months otherwise.

Why Join

The Industry Has Changed — Your Preparation Must Too

In 2025, India's IT sector is hiring specialists. Companies are looking for engineers who can contribute from Week 1 — who know their stack, can build real applications, debug production issues, and communicate solutions clearly. TechReady is built around exactly what these companies are hiring for.

17+ Years of Placement Track Record

Archer Infotech has been placing students at IT employers since 2009 and works with 100+ hiring partners. TechReady is placement-assisted, not placement-guaranteed: we prepare you, build your portfolio, and introduce you to those partners. Past record is no guarantee of future prospects.

Trainers Who Come From the Industry You Are Entering

Every TechReady trainer is a working or recently retired corporate professional with a minimum of 15 years of industry experience. They know what interviewers ask, what projects impress, and what real production code looks like.

Full-Time Intensity — Because Half-Measures Don't Work

TechReady requires a minimum of 6 hours per day, 5 to 6 days per week. This is intentional. Half-committed learning produces half-ready candidates. If you treat this like a full-time job — it will get you one.

One Program, Complete Transformation

Technical skills. Projects. DSA preparation. Mock interviews. Resume writing. LinkedIn. Communication training. Aptitude coaching. Placement drives. TechReady covers everything.

Programmes

Java Full Stack Developer

One of the most in-demand and highest-paying developer profiles in India's IT industry.

Java powers banking, enterprise software, healthcare systems, and large-scale applications across every major industry.

- Core Java (4 Weeks): OOP, Collections, Exception handling, Generics, Multithreading
- Advanced Java (3 Weeks): JDBC, Servlets, JSP, Build tools (Maven/Gradle)
- Spring Boot (5 Weeks): REST APIs, Spring Security, JPA/Hibernate, Microservices intro
- Frontend (5 Weeks): HTML5, CSS3, JavaScript ES6+, React.js — components and hooks
- Database (3 Weeks): MySQL, PostgreSQL, Design, optimisation, joins, transactions
- DevOps Basics (2 Weeks): Git, Docker, CI/CD pipelines, AWS EC2 and S3 basics
- Capstone Project (4 Weeks): Full stack Java + React application — built, tested, and deployed
- Placement Prep (Ongoing): DSA in Java, System design basics, Mock technical and HR interviews

Career roles:

- Java Developer
- Full Stack Developer
- Backend Engineer
- Spring Boot Developer
- Software Engineer

Python Full Stack Developer

Python's versatility makes Python Full Stack Developers among the most adaptable professionals.

Python dominates AI, data science, and backend development. Python Full Stack Developers are sought after by startups, product companies, and MNCs.

- Python Core (4 Weeks): OOP, File handling, Error handling, Modules and packages
- Backend Development (5 Weeks): Django or FastAPI, REST APIs, Authentication, Middleware
- Frontend (5 Weeks): HTML5, CSS3, JavaScript ES6+, React.js
- Database (3 Weeks): PostgreSQL, MongoDB, ORM with SQLAlchemy or Django ORM
- DevOps Basics (2 Weeks): Docker, Git, Deployment on AWS or VPS, Environment management
- Capstone Project (4 Weeks): Full stack Python + React application deployed and live
- Placement Prep (Ongoing): DSA in Python, System design, Mock interviews, Resume prep

Career roles:

- Python Developer
- Full Stack Developer
- Backend Engineer
- Django Developer
- FastAPI Developer

MERN Stack Developer

The modern web developer's stack — powering thousands of startups and SaaS products.

MongoDB, Express.js, React.js, and Node.js — the MERN stack is the backbone of modern JavaScript-based full stack development.

- JavaScript Deep Dive (3 Weeks): ES6+, async/await, Closures, Prototypes, Event loop
- React.js (5 Weeks): Hooks, Redux Toolkit, React Router, Tailwind CSS, Component architecture
- Node.js + Express.js (4 Weeks): REST API design, Middleware, Authentication (JWT), File uploads
- MongoDB (3 Weeks): Schema design, Mongoose, Aggregation pipelines, Indexing
- Full Stack Integration (4 Weeks): Connect frontend to backend, State management, Error handling
- DevOps and Deployment (2 Weeks): Docker, Vercel, MongoDB Atlas, GitHub Actions basics
- Capstone + Placement (5 Weeks): Full MERN application, DSA prep, Mock interviews

Career roles:

- MERN Stack Developer
- Full Stack JavaScript Developer
- React Developer
- Node.js Developer

MEAN Stack Developer

Enterprise-grade JavaScript full stack — preferred by large organisations.

The MEAN stack replaces React with Angular — making it the preferred choice for enterprise-grade applications.

- TypeScript and Angular (6 Weeks): Components, Services, Routing, Reactive forms, RxJS, NgRx
- Node.js + Express.js (4 Weeks): API design, Middleware, Authentication, Error handling
- MongoDB (3 Weeks): Schema design, Mongoose, Advanced queries
- Full Stack Integration (3 Weeks): Complete MEAN application, Docker, Cloud deployment
- Capstone + Placement (5 Weeks): Full project, DSA practice, Mock technical interviews

Career roles:

- MEAN Stack Developer
- Angular Developer
- Full Stack Developer
- Enterprise Web Developer

.NET Full Stack Developer

Microsoft's enterprise technology stack — top choice for government, banking, and insurance.

.NET is the backbone of a significant portion of India's enterprise IT landscape. Consistently in demand at Infosys, TCS, Wipro, Cognizant, and enterprise product companies.

- C# Core (4 Weeks): OOP in C#, LINQ, Delegates, Async/await programming
- ASP.NET Core (5 Weeks): Web APIs, Entity Framework Core, Identity, Middleware
- Frontend (5 Weeks): HTML5, CSS3, JavaScript, Angular or React
- SQL Server (3 Weeks): T-SQL, Stored procedures, Triggers, Performance tuning
- Azure Basics (2 Weeks): Azure App Services, Azure DevOps, Cloud deployment
- Capstone + Placement (4 Weeks): Full .NET application deployed on Azure, Interview prep

Career roles:

- .NET Developer
- Full Stack Developer
- C# Developer
- ASP.NET Developer
- Azure Developer

Data Analytics

Transform raw data into decisions — one of the most in-demand skills across every industry.

Every company needs professionals who can collect, clean, analyse, and communicate data clearly. Data Analysts are among the most consistently hired profiles.

- Excel and SQL (4 Weeks): Advanced Excel, Pivot tables, SQL queries, Joins, Aggregation
- Python for Data (4 Weeks): Pandas, NumPy, Data cleaning, Exploratory data analysis
- Data Visualisation (4 Weeks): Tableau, Power BI, Matplotlib, Dashboards and visual storytelling
- Statistics for Analysis (3 Weeks): Descriptive and inferential statistics, Hypothesis testing basics
- Business Analytics (3 Weeks): KPIs, Business metrics, Dashboard design, Presenting insights
- Capstone + Placement (6 Weeks): Real-world analytics project, Industry case studies, Interviews

Career roles:

- Data Analyst
- Business Analyst
- MIS Analyst
- Reporting Analyst
- BI Developer

Data Science

Build intelligent, data-driven systems — the most future-proof technical career.

Data Scientists build the models and pipelines that power recommendation engines, fraud detection, healthcare diagnostics, and every intelligent application.

- Python and Statistics (4 Weeks): Python 3, Probability, Descriptive and inferential statistics
- Machine Learning (5 Weeks): Regression, Classification, Clustering, Scikit-learn, Model evaluation
- Feature Engineering (3 Weeks): Data preprocessing, Feature selection, Pipelines, Cross-validation
- Deep Learning (4 Weeks): Neural networks, TensorFlow/Keras, CNNs, Model tuning
- NLP Basics (2 Weeks): Text preprocessing, Tokenisation, Sentiment analysis
- Model Deployment (2 Weeks): Deploying ML models with Flask, FastAPI, and Streamlit
- Capstone + Placement (4 Weeks): End-to-end ML project — from raw data to deployed model

Career roles:

- Data Scientist
- ML Engineer
- AI Analyst
- Research Analyst
- Data Science Developer

Data Engineering

Build the infrastructure that makes all data science and analytics possible.

Data Engineers build the pipelines, warehouses, and processing systems that move and transform data at scale. Demand is growing faster than almost any other technical role.

- SQL and Python (4 Weeks): Advanced SQL, Python scripting for automation and ETL
- Data Pipelines (4 Weeks): Apache Airflow, ETL design patterns, Pipeline orchestration
- Big Data Basics (4 Weeks): Hadoop ecosystem, Apache Spark, PySpark for large-scale data
- Cloud Data Platforms (4 Weeks): AWS S3, Redshift, Google BigQuery, Cloud data warehousing
- Streaming Data (2 Weeks): Apache Kafka basics, Real-time data streaming concepts
- Capstone + Placement (4 Weeks): Design and build a complete data pipeline, Interview prep

Career roles:

- Data Engineer
- ETL Developer
- Big Data Engineer
- Cloud Data Engineer
- Pipeline Developer

Machine Learning and AI Engineer

The most cutting-edge technical career — building intelligent systems transforming every industry.

ML and AI Engineers design, train, evaluate, and deploy intelligent machine learning models at scale. Among the most sought-after and highest-paid professionals globally.

- Python and Mathematics (4 Weeks): Linear algebra, Calculus, Probability, Mathematical foundation of ML
- Classical Machine Learning (4 Weeks): Scikit-learn, Supervised and unsupervised learning, Model selection
- Deep Learning (5 Weeks): PyTorch or TensorFlow, Neural network architectures, CNNs, RNNs
- NLP and Large Language Models (4 Weeks): Transformers, Hugging Face, Fine-tuning, Prompt engineering basics
- Computer Vision (3 Weeks): OpenCV, Image classification, Object detection, YOLO
- MLOps (2 Weeks): Model versioning, Deployment pipelines, Monitoring, MLflow
- Capstone + Placement (4 Weeks): End-to-end AI project, Research paper review, Mock interviews

Career roles:

- ML Engineer
- AI Engineer
- Deep Learning Engineer
- NLP Engineer
- Computer Vision Engineer

Advanced Frontend Development

React, Angular, React Native, and Flutter — build interfaces for web and mobile.

Advanced Frontend Developers build complex, high-performance applications for web and mobile. Ideal for specialising in the most visible, user-facing layer of technology.

- JavaScript Mastery (3 Weeks): Deep ES6+, TypeScript fundamentals, Performance patterns
- Advanced React.js (5 Weeks): Redux Toolkit, Performance optimisation, Testing, SSR with Next.js
- React Native (4 Weeks): Cross-platform mobile apps, Navigation, Device APIs, App publishing
- Angular (4 Weeks): Enterprise Angular, RxJS, NgRx, Module architecture
- Flutter (4 Weeks): Dart language basics, Flutter UI, State management, iOS and Android
- Capstone + Placement (4 Weeks): Build and publish a cross-platform mobile app, Portfolio prep

Career roles:

- Frontend Developer
- React Native Developer
- Flutter Developer
- Mobile App Developer
- UI Engineer

Projects You Finish With

Phase projects across the programme

Each phase ends in something built rather than something attended — a REST API with authentication, a React interface consuming it, a normalised schema under both, a containerised deployment. These are reviewed and revised rather than submitted and forgotten, which is what makes the capstone possible later.

- Technology: Your programme's stack
- Technology: Git
- Technology: GitHub
- Technology: Postman
- Technology: Docker

The reviewed capstone

Four to six weeks of full-time work on a single end-to-end system in your chosen programme's stack, with a mentor reviewing architecture decisions rather than only output. The revision cycle is the point: most candidates have never had someone senior tell them why a design choice was wrong, and it is the fastest quality jump in the programme.

- Technology: Full stack of your programme
- Technology: Cloud deployment
- Technology: CI/CD
- Technology: Architecture decision records

A portfolio built to be read

Repository structure, README files that explain what a project does and why, commit history that shows progression, and a deployed link where one makes sense. Interviewers spend two minutes on a GitHub profile; this session is about what those two minutes should show.

- Technology: GitHub
- Technology: Markdown
- Technology: Deployment
- Technology: Documentation

Included With Every Track

- DSA and Competitive Problem Solving - Arrays, strings, linked lists, stacks, queues, trees, graphs, sorting, searching, dynamic programming — practiced at the company interview level. Regular coding challenges and timed problem sets.
- System Design Basics - Scalability, load balancing, databases, caching, microservices, and real-world architecture discussions for fresher and junior interviews.
- Mock Interview Program - Full mock interviews — technical coding rounds, system design rounds, and HR/behavioural rounds — conducted by industry professionals. Recorded, with structured feedback.
- Resume Writing and ATS Optimisation - Professional, ATS-optimised resume that gets shortlisted. Formatting, impact-driven bullet writing, skills presentation, and role-specific tailoring.
- LinkedIn and Naukri Profile - Recruiter-optimised profiles with keyword strategy, connection building, and activity planning that puts you in front of hiring managers.
- Communication and Soft Skills - MNC-standard English communication — speaking confidently, presenting technical solutions, participating in group discussions, and handling behavioural interviews.
- Placement Drives and Company Connections - Active hiring relationships with 100+ companies across Pune, Mumbai, Bengaluru, and Hyderabad. TechReady students are eligible for placement drives, direct referrals, and interview scheduling.

Tools and Technologies

Ten programmes, each with its own stack. You work in one of them — the full list is here so you can see what a programme commits you to before you enrol, not after.

Java Stack

- Core Java
- Advanced Java
- Spring Boot
- REST APIs
- JUnit
- Maven

Python Stack

- Python Core
- Django
- FastAPI
- SQLAlchemy
- PyTest

JavaScript Stack

- JavaScript ES6+
- TypeScript
- React.js
- Angular
- Node.js
- Express.js
- MongoDB

Microsoft Stack

- C#
- ASP.NET Core
- Entity Framework
- SQL Server
- Azure basics

Data and Analytics

- Excel
- SQL
- Pandas
- NumPy
- Power BI
- Tableau
- Statistics

Machine Learning and AI

- Scikit-learn
- TensorFlow
- PyTorch
- NLP
- Large Language Models
- Computer Vision
- MLOps

Data Engineering

- Data pipelines
- Big data basics
- Cloud data platforms
- Streaming data
- Airflow

Mobile and Cross-Platform

- React Native
- Flutter

DevOps and Delivery

- Git
- GitHub
- Docker
- CI/CD pipelines
- Cloud deployment
- Postman

Career Outcomes

TechReady is the placement-focused programme of the three, and the only one that asks for full-time commitment. Six hours a day for six to eight months is a real cost — the return is a reviewed portfolio, interview practice against people who hire, and introductions to our partner companies.

Immediate benefits

- A capstone project that has been reviewed and revised, not just submitted.
- A GitHub portfolio and README discipline that survives a technical interviewer reading it.
- Mock interviews with feedback, run as separate technical, system-design and HR rounds.
- Aptitude and communication training, which is where most technically capable candidates are actually filtered out.
- Introductions into our network of 100+ active placement partners.

Longer-term paths

- Java Developer, Backend Engineer or Spring Boot Developer
- Python Developer, Django or FastAPI Developer
- Full Stack Developer — MERN, MEAN, Java or .NET
- .NET Developer or Enterprise Application Developer
- Data Analyst, Business Analyst or Analytics Engineer
- Data Scientist or Data Engineer
- Machine Learning Engineer or AI Engineer
- Frontend Developer or Mobile Developer (React Native, Flutter)

An honest word on placement

We describe TechReady as placement-assisted, and we mean assisted. Our institute-records placement rate across all tracks is 90% — not 100%, and we will not claim otherwise. What we control is preparation, portfolio quality, and introductions to the 100+ companies we work with; what you control is applying consistently through the months after you finish. The candidates who do not convert are, in our experience, far more often held back by interview communication than by what they can build.

Indicative Pune salary bands

- Junior Java Developer (Pune) - Rs. 3,62,182 per year (source: Indeed Pune (December 2025))
- Junior Python Full Stack Developer (Pune entry, <2 years) - Rs. 4,00,000 – Rs. 7,00,000 per year (source: AmbitionBox Pune Python Full Stack Developer)
- Junior Data Analyst (Pune entry, <2 years) - Rs. 3,50,000 – Rs. 6,00,000 per year (source: AmbitionBox Pune Data Analyst)
- Junior ML Engineer (Pune entry, <2 years) - Rs. 6,00,000 – Rs. 10,00,000 per year (source: AmbitionBox Pune ML Engineer)
- Full Stack Developer overall — Pune - Rs. 10,61,661 per year (source: Indeed Pune Full Stack (January 2026, n=35))

Companies hiring for these skills in Pune

- Persistent Systems
- Capgemini

- LTIMindtree
- Tech Mahindra
- Amdocs
- Cybage
- Cognizant
- Wipro
- Accenture
- Saksoft
- TCS
- IBM India

Fees

TechReady is the largest of our three programmes in both duration and cost, and the fee varies by programme — the ten tracks differ in length, from six to eight months. We quote against the specific programme rather than publishing one number that would be wrong for most of them. EMI options exist and most students use them; ask admissions for the current schedule for your chosen programme.

- One-time payment at enrolment
- EMI plans — the option most TechReady students take
- Instalments aligned to programme phases
- Free demo class and programme-selection counselling before you commit

Placement Support

TechReady is the placement-focused programme of the three, and placement support is bundled rather than sold separately. It begins during the programme rather than after it: by the time you finish, your CV is written, your portfolio is reviewed, and you have sat several mock interviews with feedback.

We describe the programme as placement-assisted and mean it literally. Our institute-records placement rate across all tracks is 90% — we will not claim 100%, and you should treat any Pune institute that does with caution. What we control is preparation quality and introductions to the 100+ companies we work with. What you control is applying consistently in the months after you finish. In our experience the candidates who do not convert are held back far more often by interview communication than by what they can build, which is why aptitude and communication training run throughout rather than at the end.

The process

- Throughout: aptitude and communication training running alongside the technical phases
- Capstone phase: CV built around your actual project work, GitHub portfolio audited
- Capstone phase: technical mock interview with structured written feedback
- Capstone phase: system-design round appropriate to your programme
- Final weeks: HR mock interview plus salary-negotiation guidance
- After completion: introductions to partner companies actively hiring your profile
- After completion: weekly placement-cell check-ins while you apply

Partner companies

- Persistent Systems
- Capgemini
- LTIMindtree
- Tech Mahindra
- Amdocs
- Cybage
- Cognizant
- Wipro
- Accenture

- Saksoft
- TCS
- IBM India

TechReady or applying directly after graduation — is six months worth it?

If you have a strong degree from a well-placed college, existing project work, and campus placements that are actually running, apply directly. Six to eight months full-time is a real cost in both fees and foregone earnings, and a candidate who can already convert interviews should not be paying for help converting interviews.

The programme is built for the situation most graduates we meet are actually in: a degree, no portfolio, no reviewed project work, and applications that are not converting. Six months is long enough to change what you can build rather than only how you present it — and the honest framing is that this is the expensive option precisely because it is the intensive one. If your gap is small, take a single course from our catalogue instead; we will tell you so at the counselling session rather than selling you the largest programme by default.

Prerequisites and How to Begin

You need to be a final-year student or a graduate of BE, BTech, BCA or BSc CS — any branch, including Mechanical, Civil, Electrical and ENTC, which are well represented in most batches. Graduate-level fundamentals are assumed but a specific programming background is not; each programme opens with a four-week language core from the beginning.

The real prerequisite is availability. Six hours a day, five days a week, for six to eight months is the commitment, and it does not survive being combined with a full-time job. The decision worth taking seriously before you enrol is which of the ten programmes to take, because switching after the language core costs weeks — we run a counselling session for that rather than letting students pick by title.

Suggested first steps

- Book the programme-selection counselling session — the ten programmes lead to different jobs
- Confirm you can genuinely clear six hours a day for the full duration
- Attend a free demo class in the programme you are considering
- Visit the Kothrud campus and ask to see current students' capstone work
- Create a free GitHub account; your portfolio starts in the first phase

How We Compare

The comparison is deliberately anonymous — these are patterns we verified across Pune institutes and the national benchmark full-time programme, not accusations about any named provider.

- At TechReady: A 90% placement rate from institute records, stated as assistance rather than a guarantee — we do not claim 100% | Most other full-time programmes: '100% placement assistance' is the default phrase across Pune — and it is the exact construction India's advertising code names as one that should not be used
- At TechReady: No separate placement fee — placement support is bundled into the course fee | Most other full-time programmes: At least one large Pune institute charges a one-time placement fee, payable after your offer letter is issued
- At TechReady: Open to BE, BTech, BCA and BSc CS graduates from any branch, with no entrance exam | Most other full-time programmes: The national benchmark full-time programme requires a technical degree with a 55% minimum plus an entrance test
- At TechReady: Six hours a day across six to eight months, in a Kothrud classroom | Most other full-time programmes: The national benchmark runs 24 weeks and about 1,200 hours, of which roughly 300 are self-study, at Rs. 99,000 plus GST
- At TechReady: Mock interviews run as separate technical, system-design and HR rounds, with written feedback | Most other full-time programmes: A single combined mock interview near the end, if one is run at all

Frequently Asked Questions

What makes TechReady different from regular coaching?

TechReady is a full-time, industry-intensive program — not a weekend course or a set of video lectures. It runs 6 hours per day, taught by professionals with 15+ years of corporate experience, and includes real projects, full placement assistance, DSA prep, communication training, and direct hiring connections with 100+ companies.

Which TechReady program should I choose?

Java Full Stack and Python Full Stack are the most consistently in-demand across large companies. MERN is ideal for startup and product company roles. Data Science and ML/AI are for those targeting the analytics and AI space. We offer free counselling sessions to help you choose.

Is TechReady available for non-CS engineering branches?

Yes. TechReady is regularly joined by students from Mechanical, Civil, Electrical, and ENTC engineering backgrounds who want to transition into software. Our curriculum brings these students from basics to job-readiness within the program duration.

What is the placement track record?

Archer Infotech has been placing students at IT employers since 2009. We maintain active relationships with 100+ hiring partners and a dedicated placement cell. TechReady is placement-assisted, not placement-guaranteed — support does not stop on the last day of the course, and there is no separate placement fee. Past record is no guarantee of future prospects.

How many hours per day is TechReady?

TechReady requires a minimum of 6 hours of training per day, 5 to 6 days per week. This is a full-time commitment — the intensity level of a job, because that is exactly what it prepares you for.

Can I join TechReady before my final exams are complete?

Yes. Many students join TechReady in their final semester, running the course alongside their last semester of college. We design the schedule to accommodate this wherever possible.

Does TechReady include placement for outstation students?

Yes. TechReady prepares students for opportunities across Pune, Mumbai, Bengaluru, Hyderabad, and other major IT hubs. Many of our placed students are from outside Pune. Online mode is available for students who cannot relocate.

Next Step

Are you TechReady?

This is the moment that defines the next 10 years of your career. Every month after graduation that passes without a structured plan takes you further from the opportunities available right now. TechReady is your 6-month transformation. From graduate to professional. From resume to offer letter. From classroom to career.
