

Salesforce Marketing Cloud Course Syllabus

Archer Infotech, Kothrud Pune | Classroom & live-online batches | Updated September 2026

Course Overview

This syllabus lists every module of the course in teaching order, with the topics covered in each. It is generated from the course page, so the two cannot disagree.

Module 1: Marketing Cloud Architecture & Setup

Schedule: Week 1

What the platform actually is, which surprises people expecting core Salesforce. Business units, roles and permissions, the account hierarchy, and the Setup areas you will live in. Data Extensions as the central concept — how Marketing Cloud stores data and why it differs from Salesforce objects.

You get access to a practice environment and configure it from empty, because inheriting someone else's configuration teaches you nothing about why it is that way.

Topics

- Marketing Cloud Studios and Builders
- Business units and the account hierarchy
- Roles, permissions and user setup
- Data Extensions versus Salesforce objects
- Sendable and non-sendable Data Extensions
- Contact model and the contact key
- Setup navigation and where things live
- Configuring an environment from empty

Module 2: Email Studio & Content Builder

Schedule: Weeks 2–3

The core craft. Building emails in Content Builder, reusable content blocks, templates, and responsive design that survives the range of clients real recipients use. Personalisation strings, dynamic content and preview-and-test against a subscriber.

Deliverability gets its own treatment because it decides whether any of the rest matters: sender authentication, reputation, list hygiene, spam-trigger avoidance and what actually happens when engagement drops.

Topics

- Content Builder, blocks and templates
- Responsive email design across clients
- Personalisation strings and dynamic content
- Preview, test sends and rendering checks
- Subscriber lists versus Data Extensions
- Sender authentication and reputation
- List hygiene and re-engagement
- Spam triggers and deliverability practice
- A/B testing email content

Module 3: Audience Segmentation, Data & SQL

Schedule: Week 4

Getting the right message to the right people, which is a data problem before it is a creative one. Data Extensions in depth, relationships between them, filtered Data Extensions and Audience Builder.

SQL is introduced at exactly the level this role needs — SELECT, JOIN, WHERE and aggregation inside Query Activities — because segmentation beyond the basics is written in SQL, and marketers who avoid it stay limited to what the interface offers.

Topics

- Data Extension design and relationships
- Import, file transfer and automation
- Filtered Data Extensions
- SQL SELECT, JOIN, WHERE and aggregation
- Query Activities and scheduling
- Audience Builder and attribute groups
- Suppression and exclusion logic
- Data retention and privacy compliance

Module 4: Journey Builder & Automation Studio

Schedule: Weeks 5–6

Where campaigns become programmes. Journey Builder — entry sources, activities, decision splits, waits, engagement splits and goals — and the design thinking behind a journey that responds to behaviour rather than pushing a fixed sequence.

Automation Studio covers scheduled and file-triggered automations, imports, queries, filters and extracts. Together these are the operational backbone, and the module closes on testing a journey properly before real people enter it.

Topics

- Journey Builder entry sources and admission
- Activities, waits and decision splits
- Engagement splits and behavioural branching
- Goals, exit criteria and journey versioning
- Automation Studio activities
- Scheduled and file-drop automations
- Multi-step campaign orchestration
- Testing a journey before it goes live
- Journey reporting and troubleshooting

Module 5: AMPscript & Dynamic Personalisation

Schedule: Week 7

The scripting layer, taught at the level a marketer genuinely needs rather than as programming. AMPscript variables, functions, conditionals and lookups; retrieving related data into an email; and formatting dates, numbers and names without producing the personalisation failures everyone has received.

SSJS and Guided Template Language are introduced briefly for awareness. The bar set here is being able to read, adapt and debug AMPscript, which is what the role actually asks for.

Topics

- AMPscript syntax, variables and output
- Conditionals and looping
- Lookup functions and related data
- Formatting dates, numbers and names
- Personalisation failure modes
- Debugging AMPscript in a preview
- Guided Template Language basics
- SSJS awareness and when it is used

Module 6: Mobile, Advertising & Cross-Channel

Schedule: Week 8

Beyond email. MobileConnect for SMS with the consent and compliance rules that govern it in India; MobilePush for app messaging; Advertising Studio for audience activation into paid channels; and Social Studio awareness.

The framing is orchestration: a journey that reaches someone by SMS after they ignored two emails is a different and better programme than three emails, and designing that is the skill.

Topics

- MobileConnect and SMS campaigns
- Consent, opt-in and Indian compliance rules
- MobilePush and in-app messaging
- Advertising Studio and audience activation
- Cross-channel journey design
- Channel selection and frequency capping
- Preference centres and unsubscribe handling
- Coordinating channels without fatiguing a contact

Module 7: Analytics, Attribution & Optimisation

Schedule: Week 9

Proving the programme worked. Tracking and engagement metrics, Datorama and Intelligence Reports awareness, and building reporting that answers a commercial question rather than displaying open rates.

Attribution is treated honestly, including its limits — the shift away from open-rate reliability after privacy protections, and why last-touch attribution flatters email. Optimisation covers testing discipline and the difference between a real result and noise.

Topics

- Tracking, engagement and conversion metrics
- Why open rate became unreliable
- Reporting that answers a commercial question
- Datorama and Intelligence Reports awareness
- Attribution models and their limits
- A/B and multivariate testing discipline
- Distinguishing a result from noise
- Presenting campaign performance to stakeholders

Module 8: Campaign Build & Certification Preparation

Schedule: Week 10 + placement prep

A complete multi-channel journey you designed, built, tested and measured, documented as a campaign case study — which is what a Marketing Cloud interview actually explores.

Alongside it, preparation for the Marketing Cloud Email Specialist and Administrator credentials: exam weightings, scenario question style, timed mocks and gap closure. Mock interviews cover journey design, segmentation and deliverability scenarios.

Topics

- End-to-end multi-channel campaign build
- Campaign case study documentation
- Email Specialist exam preparation
- Marketing Cloud Administrator exam preparation
- Timed mock papers and gap closure

- Mock interview — journey design scenarios
- Mock interview — segmentation and SQL scenarios
- Resume and LinkedIn for marketing technology roles

Module 9: AI in Marketing Cloud & Agentforce

Schedule: Final Week

Einstein features a marketer configures — send-time optimisation, engagement scoring, content selection — and what each actually needs to work: enough data, and data that is correct.

Agentforce is covered at the level of what marketing teams are being sold and what it requires underneath, with the career guide's caveat intact. Generative assistance for subject lines and copy is covered with the obvious professional caution: everything reviewed, brand voice protected, nothing sent unread.

Topics

- Einstein send-time optimisation
- Einstein engagement scoring and content selection
- Data requirements for each Einstein feature
- Agentforce in a marketing context
- Generative assistance for copy and subject lines
- Protecting brand voice and reviewing output
- Consent, privacy and AI in marketing
- Advising honestly on AI readiness
