

Salesforce Sales Cloud Course Syllabus

Archer Infotech, Kothrud Pune | Classroom & live-online batches | Updated September 2026

Course Overview

This syllabus lists every module of the course in teaching order, with the topics covered in each. It is generated from the course page, so the two cannot disagree.

Module 1: Sales Process & the Salesforce Sales Model

Schedule: Week 1

The business before the platform. Sales methodologies and how they map to a pipeline; the lead-to-cash process end to end; and the difference between a sales process that reflects how deals actually close and one that reflects how management wishes they did.

You set up your own org and configure a first pipeline against a documented process, establishing the standard for the rest of the course: every configuration decision traces to a stated business reason.

Topics

- Sales methodologies and pipeline design
- Lead-to-cash end to end
- Setting up your own Salesforce org
- Standard objects — leads, accounts, contacts, opportunities
- Record types and multiple sales processes
- Designing stages that reflect reality
- Sales roles, hierarchy and visibility
- Configuring against a documented process

Module 2: Lead Management & Conversion

Schedule: Week 2

The top of the funnel. Lead capture from web, campaigns and imports; assignment rules and round-robin distribution; qualification criteria and lead scoring; and conversion — including the mapping decisions people get wrong once and then live with.

Duplicate management gets real attention here because leads are where duplicates enter an org, and a duplicate at the lead stage becomes a duplicate account, contact and opportunity later.

Topics

- Web-to-Lead and campaign capture
- Lead assignment rules and queues
- Round-robin and territory-based distribution
- Qualification criteria and lead scoring
- Lead conversion and field mapping
- Duplicate and matching rules at lead stage
- Lead nurture handover to marketing
- Lead source tracking and attribution

Module 3: Opportunity Management & Sales Path

Schedule: Week 3

The core of the platform. Opportunity stages, probability and the sales path with guidance for each step; products and price books; opportunity teams and splits; and competitor and loss-reason tracking that actually gets filled in.

The recurring theme is adoption: every required field is a tax on a salesperson's time, and a beautifully designed process nobody follows produces worse data than a simple one they do.

Topics

- Opportunity stages, probability and close date
- Sales path and in-app guidance
- Products, price books and schedules
- Opportunity teams and splits
- Competitor and loss-reason tracking
- Required fields and the adoption cost
- Opportunity contact roles
- Designing for a salesperson's actual day

Module 4: Quoting, Contracts & Order Management

Schedule: Week 4

From an agreed price to a committed order. Quotes, quote line items, quote templates and approval; discounting rules and the approval chain; contracts and renewals; and orders.

CPQ is covered at awareness level — what it solves, when an organisation genuinely needs it, and why it is a separate specialisation rather than a feature you switch on.

Topics

- Quotes and quote line items
- Quote templates and PDF generation
- Discount rules and approval processes
- Contracts, renewals and lifecycle
- Orders and order products
- CPQ awareness — what it solves and when it is needed
- Pricing governance
- Approval process design

Module 5: Forecasting, Territories & Sales Analytics

Schedule: Week 5

What sales leadership actually asks for. Collaborative forecasting, forecast categories and hierarchy; quota management; and the reasons forecasts are inaccurate, most of which are process rather than platform problems.

Territory management covers models, assignment rules and the realignment exercise every growing sales organisation goes through. Reporting covers pipeline, velocity, conversion and the dashboards a sales director will actually open.

Topics

- Collaborative forecasting and categories
- Forecast hierarchy and adjustments
- Quota management
- Why forecasts are inaccurate — process versus platform
- Enterprise territory management
- Territory assignment and realignment
- Pipeline, velocity and conversion reporting
- Dashboards a sales director will open

Module 6: Sales Automation & Productivity

Schedule: Week 6

Removing the work salespeople resent. Flow automation for stage-driven tasks, follow-up reminders and handovers; email integration with Outlook and Gmail; activity capture; templates and cadences.

The judgement taught is restraint again: automation that fires too often gets ignored, and an alert nobody reads is worse than no alert because it teaches people to ignore the channel.

Topics

- Flow automation for sales processes
- Stage-driven task and reminder creation
- Approval processes for exceptions
- Outlook and Gmail integration
- Activity capture and logging
- Email templates and cadences
- Notification design and alert fatigue
- Mobile app configuration for field sales

Module 7: Adoption, Data Quality & Sales Operations

Schedule: Week 7

Why Salesforce implementations fail after go-live. Adoption measurement, the behaviours that indicate a rep has stopped trusting the system, and the intervention that works — which is usually removing a required field rather than adding a training session.

Data quality from a sales perspective: duplicate accounts, stale opportunities, close dates pushed indefinitely, and the hygiene process that keeps a pipeline believable.

Topics

- Measuring adoption honestly
- Signals that reps have stopped trusting the system
- Reducing friction rather than adding training
- Duplicate account and contact management
- Stale opportunity and close-date hygiene
- Pipeline believability and clean-up cadence
- Sales operations cadence and reporting rhythm
- Working with sales leadership

Module 8: Build, Certification & Interview Preparation

Schedule: Week 8 + placement prep

A complete Sales Cloud configuration for a documented business, built in your org and presented as a walkthrough — which is exactly the interview format for this role.

Alongside it, preparation for the Administrator credential as the foundation and the Sales Cloud Consultant credential as the specialisation, with timed mocks and mock interviews on sales process and forecasting scenarios.

Topics

- End-to-end Sales Cloud configuration
- Org walkthrough as an interview format
- Administrator exam preparation
- Sales Cloud Consultant exam preparation
- Timed mock papers and gap closure
- Mock interview — sales process design scenarios
- Mock interview — forecasting and reporting scenarios
- Resume and LinkedIn for Sales Cloud roles

Module 9: Einstein for Sales & Agentforce

Schedule: Final Week

AI-assisted selling, and what it actually requires. Einstein lead and opportunity scoring, activity capture, conversation insights and forecasting — each with the data volume and quality it needs, which is the part vendors gloss over and salespeople notice immediately when it is missing.

Agentforce is covered at the level of what a sales organisation is being offered and what has to be true first. The career guide's caveat applies directly: scoring built on a pipeline full of stale opportunities predicts nothing useful.

Topics

- Einstein lead and opportunity scoring
- Data volume and quality each feature requires
- Einstein Activity Capture
- Conversation and call insights
- Einstein forecasting
- Agentforce in a sales context
- Why scoring on a stale pipeline is worthless
- Advising honestly on AI readiness
- Rep trust and explainability of AI suggestions
